

# ARSENIC in NH

30%

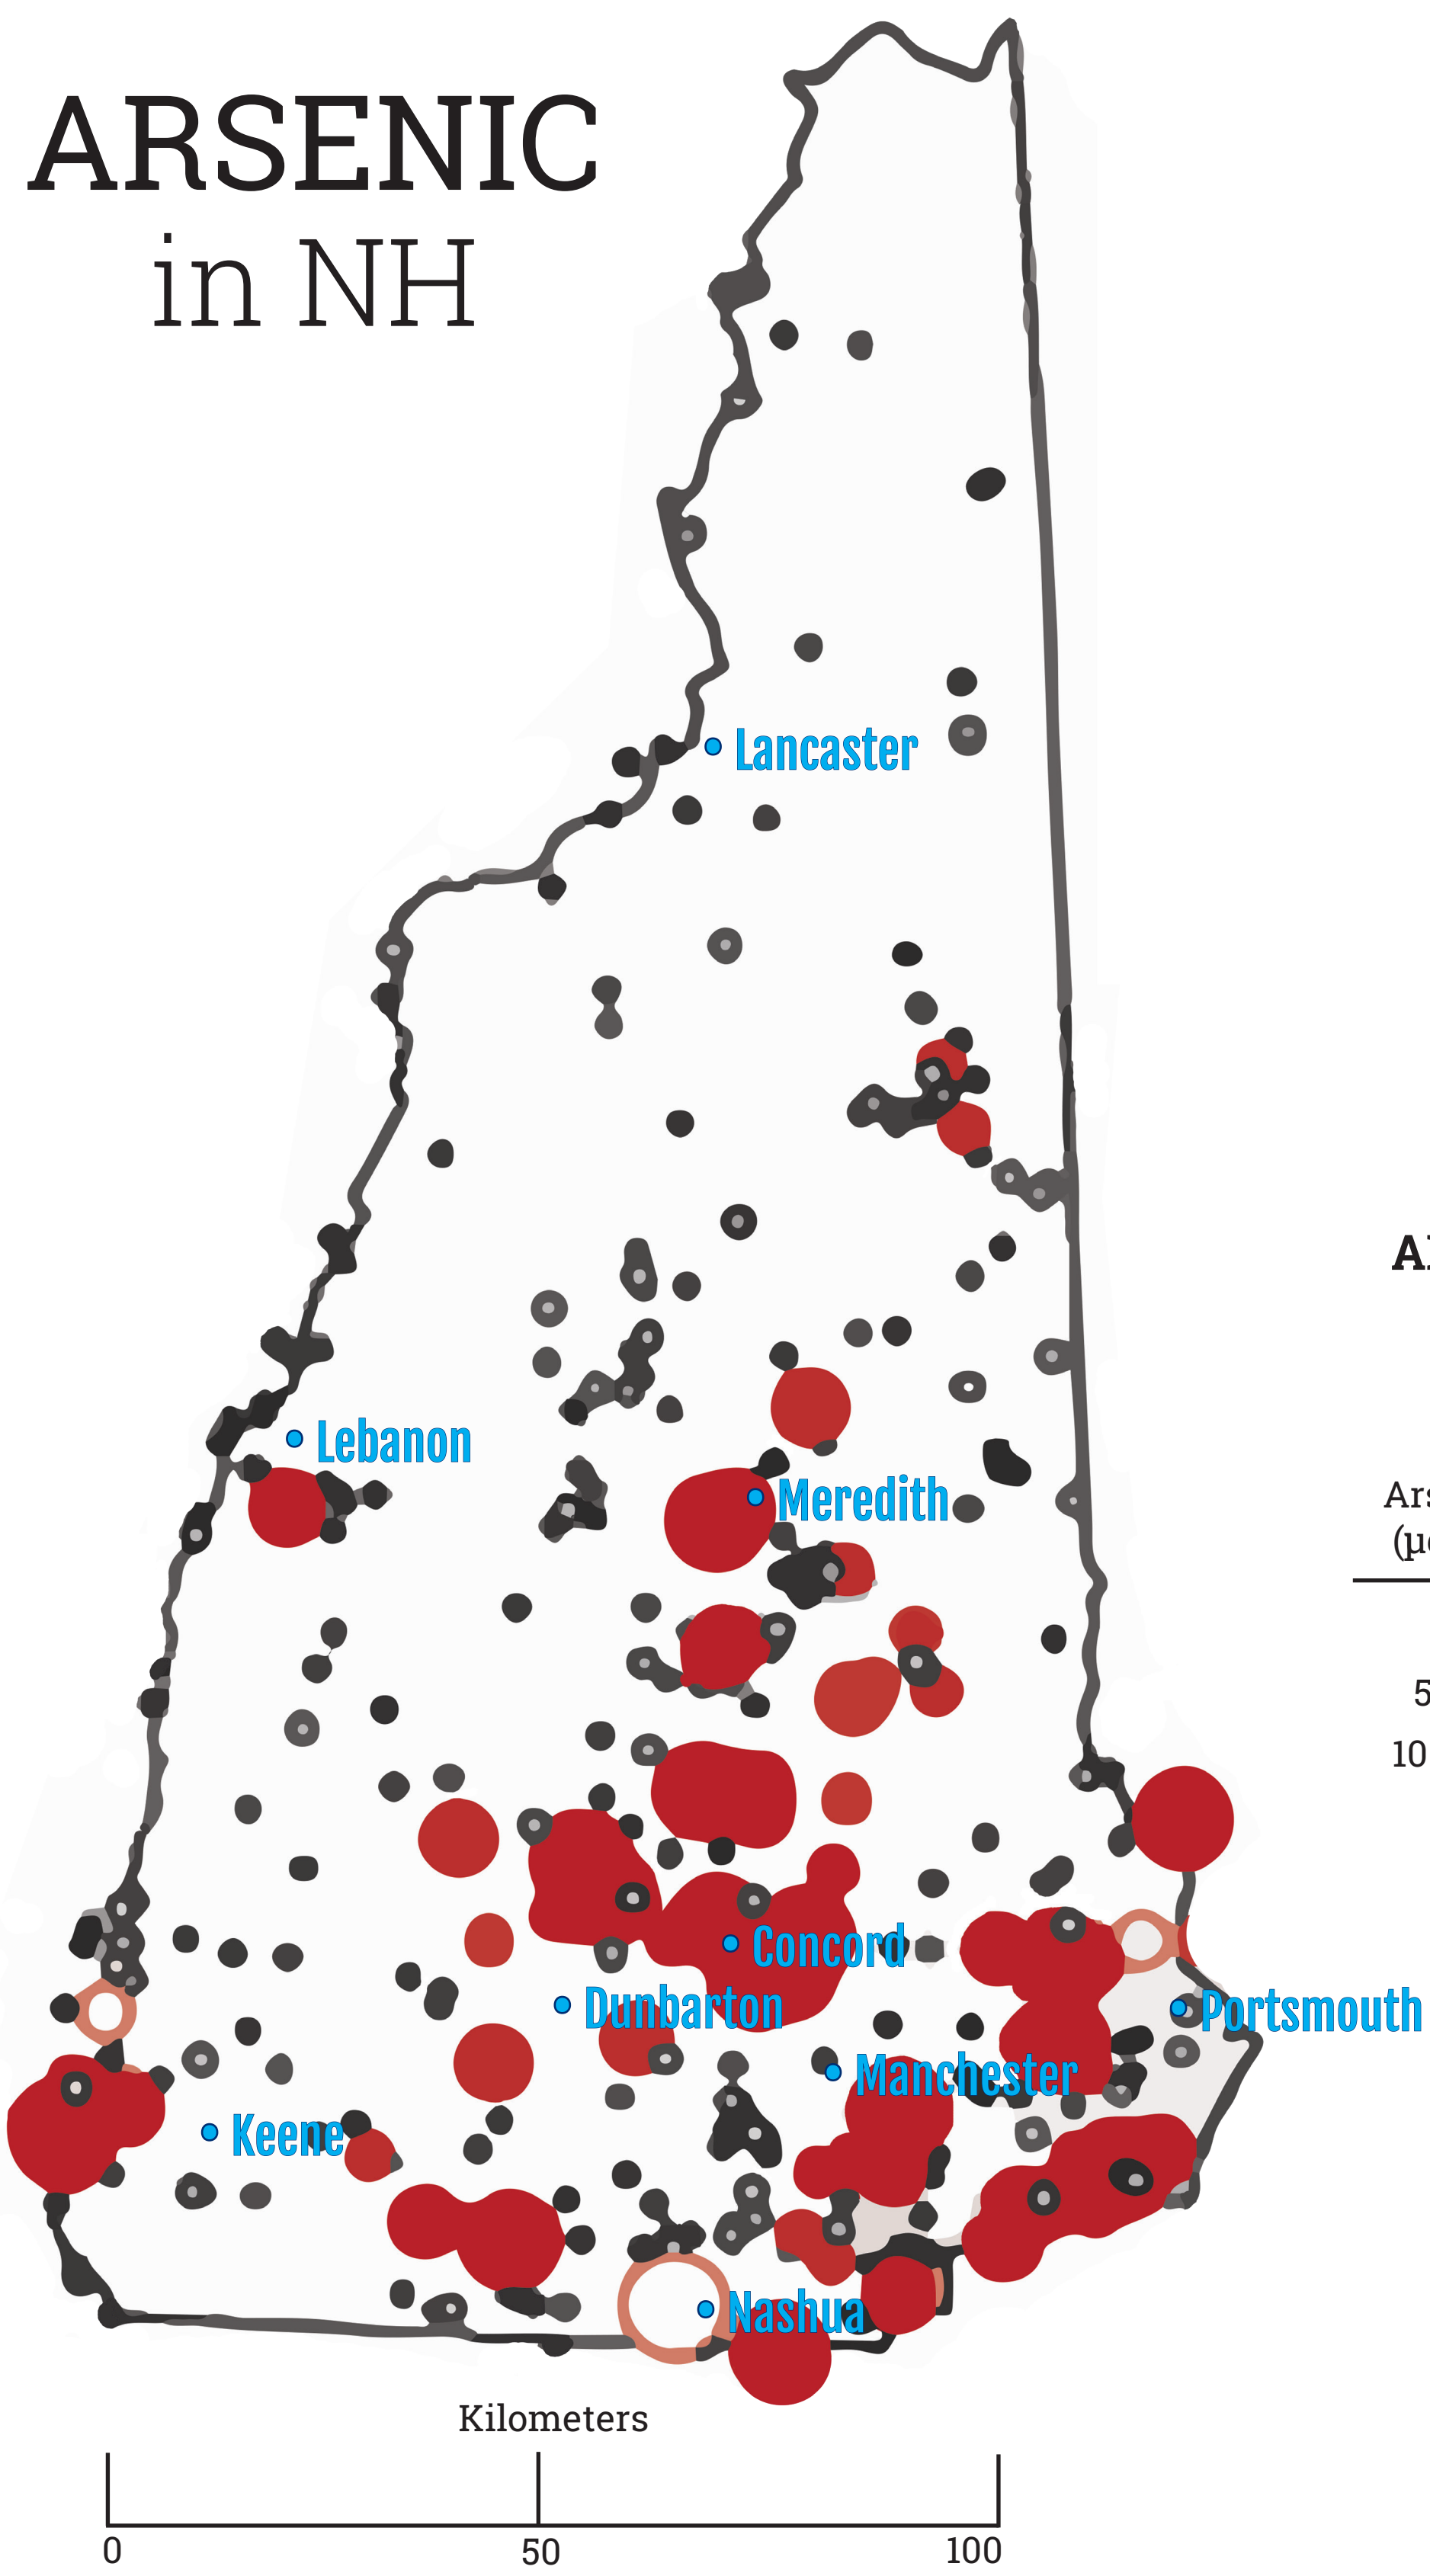

of wells have arsenic concentrations greater than 10 µg/L. -USGS

37%

higher bladder cancer in NH rate compared to the national average due to arsenic levels in private water wells. -CDC

## ARSENIC CONCENTRATIONS BY AQUIFER TYPE

| Arsenic (µg/L) | Public Bedrock (n=1855) | Public Unconsolidated (n=186) |
|----------------|-------------------------|-------------------------------|
| < 5            | •                       | ○                             |
| 5 - 10         | •                       | ○                             |
| 10 - 20        | •                       | ○                             |
| > 20           | •                       | ○                             |
